www.rainbowriversimmentals.com

On behalf of Dustin and myself, I would like to welcome you to the Rainbow River Simmentals 3rd Annual Bull & Female sale.

As you may or may not know, in 2017 Dustin and I sold our farm near Minnedosa and moved to my hometown, Fisher Branch, in the Interlake region. Since last February when our farm sold, we have moved our entire farm from Minnedosa to Fisher Branch, including every cow, calf, and replacement heifer, and every piece of equipment right down to the last steel panel. We have built a new house, new corrals (which are still under construction), and we just finished building a new calving barn which will also double as our sale facility. Amongst all of the moving, construction and regular ongoings with the cattle, Dustin and I also farmed 750 acres of crop land near Cardale, plus about 250 grain acres here in Fisher Branch. Quite literally, our lives have been a complete blur for the last year!

We decided this period of change makes for the right time to adjust our bull sale format as well, as I've been wanting to move to an on farm sale for a few years now. In order to hire all of the professional sales staff that we identified as our first choices, we pushed our sale date back by two and a half weeks to accommodate everyone's schedules. We have put together a very professional, knowledgeable and respected crew of people for our sales team. The other exciting new addition to our sale this spring is the heifer component. This is the first time that we will be opening up our replacement heifer pen and selling females along with the bulls.

Throughout the catalogue you will notice that I mention udder quality, docility, soundness and easy keeping ability quite a bit. Those are four of the very top requirements we place on our cows, and those traits back up our sale bulls and heifers quite consistently. We believe in the strength of a good momma cow and we strive to produce cattle that are feed efficient on forages. Our main cow herd has not seen a kernel of grain since 2013. On forage alone, they are in good body condition throughout the year, rebreed in a narrow 50 day breeding window and raise a good calf. We believe those low input cows are the type that will make us, and our commercial customers, the most money.

This summer, the bulls were split into two groups and raised on two very different pastures until weaning. You will notice a divide in weaning weights because of that. Half of the bulls gained incredibly well on a reed canary grass/timothy pasture which had grass that stood taller than their dams for most of the summer, whereas the other half were on a ridge pasture that ended up being a little short on grass. The heifers went to a half section of plentiful grass and we started pail feeding them oats in December. Keeping in mind that these heifers need to breed this spring and milk well next year, they have not been pushed hard but are being grown out slowly and are in good breeding condition.

Most of our bulls and heifers on offer are sired by industry leading A.I. sires, and the balance are sired by a bull we raised, showed successfully, and used for clean up for two years. The Riddler sire group is the dominant group in the sale and as consistent as you will find. The ability of The Riddler to consistently keep gestation close to 285 days, sire the curve-bender type and stamp them with the same look is almost unprecedented. These sons by The Riddler truly are herd bull material. The Vision sons offer a stylish twist with some chrome and the group of ET brothers out of our \$17,000 Blacksand Linette 823U donor cow are powerful. The Royal Red and Navigator sons are soft made, long bodied, well-muscled cattle. In the heifer department, our focus is to offer females that are "Sisters to the Bulls" in the sale. If you cross reference the bulls' pedigrees to those of the heifers, you will notice linkages between them. We selected these heifers intentionally to show the power and consistency in the sire groups and cow families on offer.

We look forward to hosting all of our past, present and future customers at our new farm. If you can't join us in person, please log on to DLMS and participate in the sale over the internet. The cattle are available for viewing anytime prior to the sale, just contact me to schedule a viewing. If you have any questions feel free to give me a call. We hope to see you on sale day!

Cheers,
Jennilee & Dustin Stewart

Inviting you to our new sale facility!

On Offer

- 16 Black Simmental Bulls
- 9 Red Simmental Bulls
- 10 Open Replacement Heifers

Sale *Information*

NEW LOCATION:

Delivery:

Option A: Bring your trailer to the sale and take your bull home sale day. Heifers must be picked up on sale day unless prior arrangements have been made.

Option B: Free delivery within 400 km to your farm, to central points in Manitoba, Saskatchewan and Alberta, or to the nearest Canada-USA border crossing. Delivery beyond 400 km to be charged at cost to the buyer. Delivery will begin immediately after the sale at the seller's convenience. If you are unable to receive your bull when we are delivering to your area, then the bull must be picked up from Rainbow River Simmentals at the buyer's expense.

Option C: Bulls may be left at the farm free of charge until April 1. A rate of \$5 per head per day will apply after April 1 and bulls will then need to be picked up by the buyer at the buyer's expense no later than May 1. We insist that all purchases be insured while remaining at Rainbow River Simmentals. All bulls and heifers become the risk of the buyer as soon as sold. While we will always take every precaution to provide the utmost care for your animal, we are not responsible for any illness, injuries or mortality after the animal is declared sold.

DNA Testing, Semen Testing and Sale Weights:

- All bulls and heifers have homo polled and coat colour results specified in this catalogue.
- Bulls will be semen tested, scrotal measured, palpated and inspected by a veterinarian. Heifers will be palpated and confirmed open by a veterinarian.
- Sale weights and semen test results will be posted on our website prior to sale day.

Health and Nutrition:

- Bulls have been developed on alfalfa haylage, native grass hay, whole oats, salt and Masterfeeds Blueprint Mineral. The whole oats has been pail fed to limit grain intake while promoting growth and longevity.
- Heifers have been developed predominately on alfalfa haylage, native grass hay, salt and Masterfeeds Blueprint Mineral. They have been supplemented with pail fed whole oats.
- All bulls and heifers have been on a total herd health program since birth, and received Ivomec pour-on at weaning (September 22 & 23 for the bulls, October 1 for the heifers), and again in February 2018. All bulls and heifers have been vaccinated and boosted with Pyramid 5 + Prespense in March and at weaning, and with Covexin Plus in March, May and at weaning. Bulls and heifers also received SafeGuard oral drench at weaning.

Semen Collection:

Rainbow River Simmentals reserves the right to collect semen on any bull sold through this sale. The semen collection will be at Rainbow River Simmentals' expense and the buyer's convenience. Any semen collected will be for Rainbow River Simmentals' in-herd use only.

Breeder Guarantee:

All bulls and heifers are guaranteed to be satisfactory breeders in accordance with the guidelines set forth by the Canadian Simmental Association. If a problem occurs with your purchase, please notify us as soon as possible. A bull of equal value and quality will be supplied, if available, or a credit given towards the purchase of another bull. Any credit issued must be used in the following year's sale and will expire thereafter. No refunds will be issued. This guarantee does not cover death, injury, sickness or mismanagement. Complete breeder guarantee details are available under the Terms and Conditions specified in this catalogue.

Sight Unseen Purchases:

If you are unable to attend the sale or unable to view the bulls and females prior to sale day, we would gladly assist you with making a sale selection. Please contact Jennilee to discuss the bulls and females in our sale offering, and your specific needs. Alternatively, feel free to contact a representative from Bohrsen Marketing as they have been through the sale cattle in early February and will represent your needs in a professional manner.

U.S. Buyers:

Exchange rate will be announced on sale day. Rainbow River Simmentals will take care of the necessary testing for export on bulls and heifers, charged at cost to the buyer.

Insurance:

Lois & Blair McRae, Keystone Livestock Services:
204-573-5192 (cell) or 204-728-3058 (home)

Accommodations:

Fisher Branch Motor Hotel, Fisher Branch: 204-372-6351
Country Harvest Inn, Broad Valley: 204-372-6618

Sale Location:

From the corner of Fisher Branch at Highway 17: 3 miles north on highway 17, turn west onto Rd 144N and go 3 miles until you come to your first stop sign. Turn north onto Rd 9W and we are the first farm on the west side, up on the hill.

From Provincial Road 325 east of Ashern: Turn south off PR 325 onto Rd 9W, go a little more than 3.5 miles on Rd 9W. We are the first farm on the west side of Rd 9W after the curves.

\$1250 In Sale Credits!

We value our customers and everyone who expresses interest in our cattle. To show our appreciation, we would like to reward you with a few sales credits to be drawn as follows:

PRE-SALE CREDIT: Register to bid sale day either in person or online with DLMS and be entered to win one of two pre-sale credits in the amounts of \$500 and \$250.

BUYER'S CREDIT: For each lot purchased during the sale, the successful buyer will be entered in a post-sale draw to win a \$500 credit. If the winner of this draw also won one of the pre-sale credits, then it's their lucky day! This is our way of saying "Thank You" to our customers for investing in a Rainbow River bull or heifer.

Please join us for lunch on sale day

W/C WIDE TRACK 694Y
 MISS WERNING 694S
 WHEATLAND STOUT 930W
RF CERTAINLY FLIRTIN 202Z
 RF FLIRTIN FOR CERTIN 37U

This bull is pure power in the flesh and in pedigree, and a very deserving candidate to kick off our 2018 bull offering. He has been a stand out since day one and stems from one of the most prominent and successful cow families in the Canadian Simmental breed. It goes without saying that his dam, RF Certainly Flirtin 202Z, is one of the most famous cows in the country, with well over \$400,000 in progeny and embryo sales to date. She is a double Supreme Champion female at CWA and the third generation in her cow family to win the Alberta Supreme at Farmfair. Adding W/C Wide Track to the pedigree of 38E only adds more power, maternal strength and outcross genetics to the mix. Garth Rancier saw the dam of Wide Track in the states and was so impressed by her that he decided to flush 202Z this way. As a testament to the strength in the pedigree of 38E, a full sib sister to him sold for \$18,000 in the 2016 Friday Night Lights sale. 38E is a stylish, eye-catching bull that is proud fronted and nice headed, plus powerful from all angles with his deep, soggy rib, big hip and top, and awesome hair. He did have a notch higher BW, but his recip dam is a purebred cow that ranks at the bottom 90% of the breed for BW, so we attribute his extra size to her influence. His own EPDs for CE and BW rank above breed average at the top 45% and 35% of the breed. His daughters should be impeccable females and we think he will do a lot of good for whoever steps up to buy him. We will be retaining semen for in-herd use and we look forward to the impact he will also have on our program.

Dam - RF Certainly Flirtin 202Z

38E in January 2018

 LFE BS CHARO 23Y

MSC FANTASY
GBV BLACK UMBRA 78U
 RAINBOW RIVER TOORED 120N

22E is a powerful Riddler son and a true sale feature. Every good herd bull needs a great dam, and the dam of 22E is exactly that. 78U is an easy keeping, soggy, deep ribbed, wide topped cow with an ideal udder that is always noticed by visitors, including the most astute breeders. She's the kind that you'd like a whole herd of. 78U has a really good bull calf at side, has produced two of our high selling bulls in the past, a daughter sold to Sun Rise Simmentals in 2015, and we have two productive daughters retained in herd, one of which raised our high selling bull last year that sold for \$16,100 to Crossroad Farms, SK. 22E is a personal favourite of mine and one that I contemplated on keeping for our own use more than once. I just love the look of this bull. He's so soft made and stylish, and really deep ribbed, carrying that depth fully through his heart girth. He has a really wide, square hip and top, and smooth shoulder that ties into an attractive neck and head. He is sound on his feet and legs, and travels out well. His hair is thick and he has a great disposition like all the Riddler progeny do. He was extremely vigorous at birth, weaned off his dam on Sept 22 weighing a respectable 976 lbs and has a very strong EPD profile ranking him well above breed average for almost every trait. 22E really is a very complete package and a very exciting herd bull prospect. He will definitely be a front runner on sale day!

Dam - GBV Black Umbra 78U

22E Front View

Maternal Sister - Rainbowriver Cosmo 14C

Dam - GBV/JNB Black Zena 8Z

If you like them long, stylish, big footed and packed full of muscle with a big, square hip, then this feature bull is one to circle. All summer he would demand your attention with his stout hip and herd bull presence at an early age. 4E weaned off his dam on Sept 22 weighing a whopping 1084 lbs, and he didn't slow down posting a 1440 lb YW on Jan 18. He comes from a good milking, strong footed cow family and his dam is very fertile. She had three bulls prior to 4E, all of which sold off the top of our bull pen each year. 4E is the curve bender type that will calve easily on cows and really add some pounds to his calves. As an added bonus, he was born with a short gestation of 283 days.

Full Brother - Rainbowner Titan 30D

Dam - GBV JNB Red Vegas 9X

This is another really long bodied bull with lots of depth and style. His full brother, Titan 30D, was perhaps our most popular bull last spring, but suffered an injury prior to sale day. 69E is nearly a spitting image of his older brother. His dam is a good producing, dark red cow that still has nice teat size at 8 years of age. We also have two daughters of 9X producing here, both with perfect udders. A granddaughter of 9X sells as Lot 35. Yet again, her 2018 bull calf is also impressive. 69E is another high performing, curve bender type that will calve well on cows and produce good milking daughters with quality udders. His gestation was 286 days.

BLACKSAND *Linette* 823U

We purchased Linette as a \$17,000 high seller at the Black Sand Cattle Co. dispersal in 2014. We loved the strong maternal attributes and potent consistency of her sire, Liner 104S, and the power she possessed with so much body mass in a moderate frame. To say that Linette has been a game changer for our program would be an understatement. Her positive influence in our herd is obvious throughout our bull and heifer pen. We have two daughters in production, both of which have perfect udders and very strong calves at side. She has flushed consistently well, her embryos sold to date have averaged just shy of \$1950 per egg, and she has progeny walking the pastures at Valley Creek Simmentals in Australia. Linette has proven to be a very versatile and consistent donor, always producing the right kind regardless of what bull she is mated to. Lots 5 to 9 in the bull section, and Lots 27 to 29 in the heifer section are all Linette progeny out of four different sires. Lot 12 is a grandson. You will notice the consistency in her progeny on offer. Take your pick, I'm confident they will produce as good for you as Linette has for us.

 SPRINGCREEK LINER 104S
BLACKSAND LINETTE 823U
 SPRINGCREEK DAWN 131P

A more moderate framed option in the Riddler category. A real tank of a bull, built almost as wide as he is tall, super docile, and has been a favourite all year with his powerful yet stylish look. 32E was born from his recip dam with a short 282 day gestation, moderate BW and lots of vigour, and weaned off at 924 lbs on Sept 22. Check out his very strong EPD profile with 10 out of 12 traits ranking above breed average, including top 10% of the breed for WW, YW and maternal CE, as well as his API and TI ranking at the top 15% and 4%. If you're looking for a pair of bulls to run together, these two Riddler x Linette flush mates could fit the bill. All year long we've been undecided which bull we like more, you be the judge on sale day!

This freight train is one of my favourites in the whole offering and may be one of the most powerful bulls we've ever raised. He's outstanding in terms of performance, disposition and phenotype. I'm not sure that there is a photo that can truly show off how good this bull is - you need to see him in the flesh to fully appreciate him. He checks off all the boxes: wide based, big hiped, long bodied, lots of depth and full of dimension from the ground up. Soggy made with lots of hair, yet has an attractive look and herd bull presence about him. He moves out well and is a big time performance bull posting a 4.46 lb/d ADG after weaning. This mating of Riddler x Linette has proven to be a never miss genetic combination with both bull and heifer progeny. A full sib brother was our high selling black bull in 2017 to Percyview Farms Ltd, SK. Two full sib heifers sold at the Shades of the Prairies in 2016, one was a high seller to Milestone Simmentals and the other also walks the beautiful hills at Percyview Farms. Ask Grant how much he likes his heifer! Another full sib sister calved in January and is a beautiful female with an ideal udder and the right amount of milk. I would expect the same qualities in daughters sired by 43E and his sons should be performance powerhouses. Invest with confidence into this great herd bull. He is special and comes by it honestly.

RAINBOWRIVER *Godfather* 37E

BPTG1209541 ~ JNB 37E ~ Jan 29, 2017 ~ BW: 93 ~ Adj WW: 802 ~ Adj YW: 1394

CE	BW	WW	YW	Milk	MCE	MWW	API	TI
6.1	3.4	73.7	112.4	16.6	6.3	53.5	111.6	67.6

Another really stout feature bull with a strong herd bull presence that has been a favourite all year. When we flushed Linette to The Godfather I envisioned the progeny ending up exactly like 37E. Powerful. Performance oriented. Docile. Good hair and lots of testicle. The Godfather was a red, performance type bull that we used and loved the quality of his calves. He is now deceased and his semen is unavailable, so scoop up a powerful Godfather son while you can as there won't be many left to choose from in the future. 37E is the only bull we got from the eggs we implanted last year from that flush. A flush mate sister sells as Lot 28 and we are retaining another sister for ourselves. 37E showed a strong herd bull presence at an early age and has lots of natural muscle shape, width and dimension. He was born with a moderate BW and a gestation of 285 days, and weaned off at 903 lbs on Sept 22.

RAINBOWRIVER *Tiger* 65E

BPG1213510 ~ JNB 65E ~ Feb 16, 2017 ~ BW: 109 ~ Adj WW: 857 ~ Adj YW: 1307

CE	BW	WW	YW	Milk	MCE	MWW	API	TI
0.4	5.7	75.1	107	19.5	7.7	57.1	99.72	64.65

This is Linette's natural calf. 65E weaned off just a couple pounds shy of 900 lbs on Sept 22, proving that Linette can raise them as good as she can produce them. We purchased his sire, IPU Tiger 73C, as the \$30,000 high selling black bull from Labatte Simmentals in 2016, but lost him to an injury. 65E is long bodied with a round hip and lots of muscle expression. Like his sire, 65E will be a performance type bull adding extra stretch to his calves. He does have a higher BW, but much of that extra weight is attributed to his extra length and when we sell calves by the pound, we know that length pays. He calved easily, unassisted and with lots of vigour, and he's smooth enough through the shoulders that I would expect the same from his calves. If you like your calves starting off with a bit more substance at birth, then 65E will fit the bill.

 SPRINGCREEK LINER 104S
BLACKSAND LINETTE 823U
 SPRINGCREEK DAWN 131P

The last Linette son on offer this year and what a herd bull he is! 54E is a soft made, big hipped, attractive package with lots of spring and depth of rib. You really have to appreciate the overall mass, natural muscle expression, dimension and look that this bull has. The Royal Red sire really clicked with Linette and is a genetic combination that we felt would stack some maternal greatness by mixing the famous Smarty Pants cow with Linette and Liner 104S. If you're into keeping your own replacement heifers, the daughters off 54E should have a lot of potential. We had another really good ET brother to 54E but he got hurt on pasture before weaning and never recovered. Too bad because having him stand beside 54E on sale day would have really shown the potency of this breeding. A flush mate sister to 54E sells as Lot 29. This bull was extremely vigorous when he was born and has a notch more BW which we attribute to his big recip dam who always increases BW in her calves. His ET brother was born with a 97 lb BW last year, and another flush mate brother was just born on Feb 3 weighing 90 lbs.

The only black Royal Red bull on offer and he has a soft-made look that I really like. His dam is the good 10R donor cow that we purchased from Spring Creek Simmentals a few falls ago. 10R is now 13 years old and maintains an udder that looks like it belongs on a two year old. We have two daughters in production and both have impeccable udder quality (a heifer off one of those daughters sells as Lot 34). 10R is the dam of the well-known sire, Springcreek Teddy 72U, and has several daughters working in breeder herds. To be honest, when I bred 10R to Royal Red I was hoping that 70E would be a heifer. My loss is your gain! He will produce a fancy set of steers and excellent replacement heifers to strengthen your female base.

SPRINGCREEK LINNE 10R
 ACS MISS CHUCKWAGON 24M

This soggy, deep ribbed, blaze-face bull is the easy calving, curve bender type that we all search for. He has impressed since day one. He's the natural calf out of our fantastic \$19,000 donor cow, IPU 56U Ms Morgan 41C, who we heartbreakingly lost this fall. Based on her production record, the maternal attributes that 58E will have should be extremely strong. 58E has a very easy going disposition and awesome hair. I can just imagine the soggy, hairy set of calves he would sire. 58E was born unassisted with a moderate BW and a 285 day gestation. His EPDs rank him in the very top end of the breed for all but two traits, including the top 10-15% for CE, WW, YW, MCE, CW, and REA, plus he ranks at the top 25% for API and top 3% for TI.

Dam - IPU 56U Ms Morgan 41C

 SUN RISE BLACK 33A

A powerful Vision son with a striking look. He belongs to the Linette cow family and is the first calf out of a baldy face female with a perfect udder. We used Mr CCF Vision on heifers and were really impressed with their ease of calving, extreme vigour at birth and consistently short gestations. This bull has a flick of white on his forehead, wide hip and top, a ton of spring of rib and is sound structured. His rear view is really impressive. His breeding potential is strong with maternal greats like Liner 104S, Linne 33R and Vision in his pedigree. His EPDs are very good and suggest he will sire the curve-bender type. 5E was born unassisted with lots of vigour and a short gestation of 280 days.

Dam - Rainbowriver Linette 27C

I had made a note in my calving book that he was a "beautiful calf" when he was born... the good ones always have that special look from the start!

All three of these Vision sons are deserving sale features, but this bull offers the ideal chrome package and has a really proven dam to back him up. He's an ET son out of our foundation black cow, "Blackie 321N", who started off our black program back when dad first got into black Simmies. She was one of the easiest keeping and best footed cows to ever walk our pastures. The females out of Blackie are some of the strongest cows in our herd and earned Blackie her spot in our donor pen a couple years ago. I'm so thankful we flushed her when we did, because a hip injury took her down this summer and we had to say goodbye to the old girl at 14 years of age. That was a sad day, but at least we have an embryo bank to carry on her influence. We have never sold a daughter of Blackie, and probably never will, so the only way to acquire her genetics directly is through a son. We have an ET sister to 33E in our keeper pen that is very good. 33E has a good disposition and is very sound footed, good boned and free moving. He has lots of natural muscle expression and a really round hip, a square top and deep, soft middle third all tied into a smooth made, stylish look. He should sire an attractive set of calves, and it wouldn't hurt if they inherited his blaze face either! His gestation was 284 days.

Dam - KLC Miss Bring 321N "Blackie"

33E Front View

Maternal Sister - GBV Black Whisper 76T

This bull comes from a fertile cow family known for their good looks and udder quality. He is from the same cow family as the Lot 21 and 22 bulls. He was a twin to another bull. 62E was removed from his natural dam to adopt onto another cow that lost her calf, but that cow refused to accept him, so he was orphaned and raised (along with three other calves) by our two Holstein nurse cows. He had a bit of a rough start to life but still managed to be one of the higher performing bulls in his sire group. 62E is soft made, good haired and moderate framed with good length.

The dam of 52E is a deep bodied, easy keeping, tank of a cow that we purchased from Spring Creek Simmentals in 2013. She has been a good producer for us and for Spring Creek. We have a nice Liner 56U daughter of hers in production, and she is the granddam of the Lot 26 heifer in this sale. Her docile, laid back disposition has been inherited by 52E. He is one of the bulls that grazed the poorer ridge pasture this summer, so his WW suffered a bit. 52E is another moderate framed Navigator son with good length and thick hair that should sire a consistent set of market calves. He had lots of vigour at birth and a gestation of 286 days.

This bull is the biggest framed Navigator son on offer and has a very quiet disposition. Although he isn't the thickest bull in the pen, he has a deep rib, good testicle size and strong maternal credentials with Crosby, and the famous donor cows Erixon Lady 202S and CG Black Opal 652S in his pedigree. His dam is a very good milker and sets the standard for udder quality with ideal teat size. It's hard to find better udders than what the cows in his pedigree offer. I believe 53E can be used with confidence to correct udder structure and improve milking ability in his daughters. His gestation was 285 days.

27E at side of dam at weaning

27E is a long bodied, big footed, well-muscled bull that is a true sale feature. He is docile with lots of herd bull presence. 27E is a big time performance bull, boasting an actual WW of 1045 lb on Sept 22 and an actual YW of 1430 lb on January 18. His dam is a great cow with an incredible production record. She is one of the few cows I have left from my dad's breeding program. Every bull she's raised has topped our bull pen and performed equally as good as 27E. Her five sons to date have an average adj YW of 1501 lbs, and I'll bet her bull calf at side will be the sixth to follow suit. This bull will certainly produce a consistent, heavy set of calves and some very functional heifers with longevity built in. Do yourself a favour and take 27E home on sale day.

The dam of this bull is one of our heaviest milking cows on the farm and always brings home a big calf. She is a big framed, deep bodied, powerful cow and deep, dark cherry red in colour. She has passed that dark colour onto every one of her calves, including 51E. She too is one of the few remaining cows in the herd that I kept from my dad's program. 51E is a son of the popular calving ease sire, Sheriff, but he has inherited his larger frame and powerful phenotype from his dam. 51E is a really deep bodied bull with a docile disposition and strong herd bull look. He has a good set of EPDs with most traits ranking in the top 30% or better of the breed, and his EPDs suggest that he will be the curve-bender type. He weaned off at 867 lbs on Sept 23 and was ranked third out of 19 calves in his contemporary group.

45E was raised by a first calf heifer with a perfect udder and his granddam is the dam of the Lot 20 feature bull. You have to appreciate this bull for his powerful spring and depth of rib, and how he carries that depth fully through his heart girth. He is wide and strong over his top, and has a thick, round hip that he carries down nicely, a quiet disposition and tons of hair. His sire, Circuit Breaker, is a bull that we have used with confidence in our heifer pen for years. 45E's EPD for BW is ranked at the top 10% of the breed and MCE is ranked at the top 15%. His CE EPD is at the top 30%. He was born with a wee 78 lb BW, so I believe he will be an easy calving bull that should work on well-developed heifers or second calvers.

What do the numbers mean?

CSA 2018 Spring Breed Average EPD's

CE	BW	WW	YW	MCE	MWW	Milk	API	TI
6.3	3.7	67.4	97.7	7.3	58.1	24.4	101.5	63.1

Calving Ease - The ease with which a bull's calves are born to first calf heifers. EPDs are reported as deviations in the percent unassisted births. When comparing calving ease EPDs of two sires, the larger EPD indicates a higher percent of unassisted births for calves sired by that bull.

Birth Weight - Calf weight at birth adjusted to a mature dam equivalent. Expected progeny difference is reported in pounds. The larger EPD indicates a heavier average birth weight.

Weaning Weight - Calf weight taken between 160 and 250 days of age and adjusted to 205 days of age and a mature dam equivalent. Expected progeny difference is reported in pounds. The larger EPD indicates a heavier average weaning weight for calves sired by that bull.

Yearling Weight - Weight taken between 330 and 440 days of age and adjusted to 365 days of age and a mature dam equivalent. Expected progeny difference is reported in pounds. The larger EPD indicates a heavier average yearling weight for calves sired by that bull.

Maternal Calving Ease - The ease at which a sire's daughter calve as first calf heifers. The larger EPD indicates a higher percentage of unassisted births for calves born to the sire's daughters.

Maternal Weaning Weight - The weaning weight of an animal's daughters calves. Expected progeny difference is reported in pounds. The EPD value predicts the difference in average 205 day weight of an animal's daughters calves compared to calves from daughters of all other animals evaluated. The evaluation reflects both the maternal ability of an animals daughters and the growth potential of their calves. The larger EPD indicates heavier weights due to daughters ability to produce heavier calves.

Milk - Expected progeny difference is reported in pounds of calf weaning weight. The milk EPD is a predictor of a sires genetic merit for milk as expressed in his daughters, or in other words the part of weaning weight attributed to milk genes. The larger EPD indicates heavier average weaning weights due to daughters greater maternal ability.

Both the All-Purpose Index (API) and the Terminal Index (TI) are designed to summarize EPD information for commercial users of Simmental genetics. It is important when looking at a selection index that it describes a similar situation to that in which the genetics are being used. With each index, a higher value indicates animals that are more suitable for the scenario described.

API - Ranks animals based on their relative merit for a situation where Simmental sires are used on an Angus based cowherd. Replacement females are retained into the herd from the calf crop and the remaining calves are fed and sold on a value based marketing grid that rewards carcass grade and yield.

TI - Ranks animals based on their relative genetic merit for a situation in which Simmental sires are mated to a mature Angus cow herd. All calves are placed on feed and sold on a value based marketing grid that rewards carcass grade and yield.

Sisters to the Bulls

This is a nice pedigreed Riddler daughter out of a very productive, great uddered Liner 56U cow. The Liner 56U females have made a name for themselves as some of the hands down best cows in the Simmental breed. Both 20B and her dam, 34T, have produced awesome for us, and both have strong heifer calves at side this year, which is why we decided to offer 10E to you. 10E is one of the largest framed and highest performing heifers in the pen. She weaned off her dam weighing 861 lbs on Oct 1 (without creep feed). Her EPDs for WW and YW both rank at the top 1% of the breed, with a top 10% API and top 2% TI. She is really long bodied, good haired and I'll bet she'll have a near perfect udder. She had a short gestation of 282 days.

44E is a powerful feature heifer that comes right off the top of our pen. If you've been thinking about picking up a Riddler x Linette female, you may want to act now. She may be the last we offer from this mating as it's time to start keeping some of these great females for ourselves. 44E is similar to her dam in many ways. She's got the same softness, depth and overall mass with a little extra shot of frame and length from The Riddler. 44E looks to be developing a top quality udder, too. We have one full sib to 44E that calved in January and her udder is excellent, plus her bull calf is one of the best in the pen. I'll say it again - this Riddler x Linette mating has proven to be a very consistent, never miss genetic combination. The guess work is taken out of this great female so invest with confidence!

This heifer always caught my eye when doing pasture checks this summer. I love her stylish yet powerful profile with so much depth of rib, width and softness in a moderate frame. Linette really has been so consistent with passing her body type onto her offspring. 41E has a ton of poker straight hair just like her flush mate brother, Lot 7, who is a feature in the bull section. If disposition in your replacement females means anything to you, then you will appreciate the docility of this pet. She loves attention and will beg you for a scratch whenever she sees you.

Royal Red really clicked with Linette as you can see by this heifer and her feature brother, Lot 9. It's not everyday you find a female with such explosive depth of rib tied into a pretty little neck and head. She's the most moderate of the Linette females but carries the most volume on her frame. 48E is very feminine, soft made and heavy haired. This is the only Royal Red x Linette female we will ever sell as we are out of embryos. Her recip dam is a poorer milking cow so the WW in her ET calves always suffers. 48E had a lighter WW due to the lack of milk, weaning off at 660 lbs on Sept 27, but I think her performance would have been better had she been raised on a different cow. Her rate of gain from WW to YW is par with the rest of our top end heifers.

Before deciding to use Mr CCF Vision in our program, we saw some impressive progeny around the countryside. It really is true that his daughters are beautiful females. We had four Vision daughters born last year and all of them are at the top of our pen. I really didn't want to part with any of them, but since the three Vision sons on offer are all feature bulls, I decided it would complete the package to offer up one of the heifers. 29E is really soft made, feminine, big bellied, hairy and carries some extra muscle shape. She was the first calf out of a bigger framed Overdrive female with a tidy udder from a good milking cow family. She was extremely vigorous at birth and came early at 278 days of gestation. Her EPDs and indexes are all ranked at or above breed average, right across the board.

You have to appreciate this heifer for her spring of rib and the width she carries over her top. She is a very moderate framed heifer that carries the typical Navigator stamp with the moderation of frame, and depth and softness in the middle third. Her dam is a good young cow with a good udder that raised us a high selling bull with her first calf. 46E had a gestation of 284 days.

This heifer is out of the same cow family as our Lot 13 feature bull and the Lot 33 heifer. She is a granddaughter of our proven foundation cow and donor, Blackie 32IN. A maternal sister to 47E is working for Spring Creek Simmentals, SK. Her dam, 3W, is a massive volumed, easy keeping cow with a moderate frame, and sound feet and legs - the typical stamp of all our Blackie cows. 47E's ears are a bit short because her dam always calves unexpectedly early on a cold day. When dad sold his herd in 2008, he only kept back a small handful of cows and 3W was one of them. That should tell you how highly dad regards her. 47E is a heifer with good length and depth of body, and a nice look to her.

Another female stemming from the Blackie cow family, but this time in a red package. Her dam, 32X, is a big, long, thick, beautiful cow with a good udder, and sound feet and legs who is always fat. The easy doing ability of these Blackie females really is second to none. 32X ranks in my top two favourite Blackie daughters of all time. 26E is a long bodied, wide topped female and she always stood out amongst the other heifers on pasture this summer. She was born early at 283 days of gestation.

KLC MISS BRING 32IN

The last Navigator daughter on offer and she's one I really wanted to keep. I love her stylish profile and the deep, soft middle she has. Her udder development looks to be excellent, which makes sense as she's from the Linne 10R cow family. Our first Navigator daughters are milking now and their udder quality is superb with tight suspension and small teat size. Actually, a 3/4 sister to 42E just calved and you can't make an udder any better than hers. It's perfect. 42E is one of the best performing heifers in the pen. She weaned off her first calver dam just shy of 700 lbs on Oct 1 and ranked fourth out of 12 contemporaries in her group.

3/4 sister - Rainbowriver Linne 39D

Likewise, she ranked second out of 12 for YW performance. 42E has a gentle nature and has always been a pet since she was a calf. She had a short gestation of 278 days and should make a good cow.

RAINBOWRIVER LINNE 18C
SPRINGCREEK LINNE 10R

6E is one of our top red heifers and one I was tempted to keep. The udder quality on 6E's dam and a full sister is top notch. This cow family is one of our best and 6E's dam is proving to be one of our top young cows. Her full sister calved in January and has a rip of a bull calf on her. 6E's dark red colour runs four generations deep. She is one of the largest framed heifers in the pen, is long, feminine and has strong spring of rib. Her gestation was 280 days. As a testament to the maternal strength behind her, she weaned off weighing 811 lbs on Oct 1 (without creep feed). I believe 6E will develop into a very good, functional cow.

TERMS AND CONDITIONS

TERMS: The terms of the sale are cash or cheque payable at par at the sale location. Settlement is to be made immediately after the completion of the sale. The right of property shall not pass until after settlement is made. All settlements must be made with the clerk of the sale before any cattle will be released. All monies are in Canadian funds.

BIDS: Every animal in the sale will be sold, by auction, to the highest bidder. No by-bidding will be permitted.

DISPUTES: In cases of disputes, bidding will be reopened between the parties involved. If no further bid is made, the buyer will be the person from whom the auctioneer accepted the last bid. The auctioneer's decision in such matters will be final.

PURCHASER'S RISK: Each animal becomes the risk of the buyer as soon as sold.

INSURANCE: We insist that all animals remaining at Rainbow River Simmentals after the sale MUST be insured.

ANNOUNCEMENTS: All announcements from the auction block will take precedence over the printed matter in the catalogue. Buyers are therefore cautioned to pay close attention to any such announcements.

CERTIFICATE OF REGISTRATION: Each animal will carry registration papers issued by the Canadian Simmental Association. A certificate of registration will be transferred to the buyer for each animal purchased after settlement has been made in full.

SHIPPING: Assistance will be given in arranging trucking after the sale but no risk is assumed by the seller or any sales staff. Expenses incurred are the responsibility of the buyer. Buyers are requested to furnish shipping instructions when settlement is made. If you need assistance, please contact the seller.

GUARANTEE: All animals are sold under the standard terms and guarantees as set forth by the Canadian Simmental Association (CSA). The CSA Breeder Guarantee Guidelines can be found on the reverse side of any registration paper belonging to a bull or female registered with the CSA, or on the CSA website at www.simmental.com. At no time will the seller's liability exceed the purchase price of the animal.

EXCEPTION TO GUARANTEE: This guarantee does not cover death, injury, sickness or mismanagement. No guarantee is given that a bull's semen will freeze. In cases where the animal is subjected to any hormonal or surgical reproduction techniques (i.e. embryo transfer) after the sale, the guarantee shall be null and void. Animals cannot be returned to Rainbow River Simmentals if not in a sound, healthy condition.

HEALTH: It is the buyer's responsibility to determine health requirements for importing any animal into their province or state.

ACCIDENTS: Although every precaution will be taken to protect the safety and comfort of buyers, neither Rainbow River Simmentals, or any sales staff or Association assume any responsibility in this matter and disclaim any liability, legal or otherwise, in the event of accident or loss of property.

LIABILITIES: All persons attending the sale do so at their own risk and the seller assumes no liability, legal or otherwise, for any accidents occurring in or about the premises.

RIGHTS AND OBLIGATIONS: The above terms and conditions of the sale shall constitute a contract between the buyer and seller, and be equally binding to both. Resale of animals following purchase in this sale shall constitute a separate transaction, and the rights and obligations of the two parties connected thereto are not covered by the terms and conditions of this sale.
